

Nick Bregadze

Incoming CS & AI Student | Software Engineering & Cybersecurity

Tbilisi, Georgia · Open to Remote

Email: nickbregadze@gmail.com | GitHub: github.com/nickbregadze | Discord: brega200k

Profile

Motivated software engineer and cybersecurity practitioner with a strong foundation in offensive security and network analysis. Incoming Computer Science & Artificial Intelligence student at Business and Technology University (BTU). Transitioning from vulnerability assessment to building secure, object-oriented software and privacy-preserving tools. Passionate about the intersection of Data Privacy, Cryptography, and AI.

Education

Business and Technology University (BTU) — Tbilisi, Georgia

Bachelor of Science in Computer Science & Artificial Intelligence (Expected: Fall 2026 - 2030)

Training & Certifications

Scientific Cyber Security Association (SCSA) — Nov 2025

Comprehensive Cybersecurity & Penetration Testing Specialization

Instructors: Sergei Simonovi (Ethical Hacker), Irakli Pirtskhalava, Ketevan Grdzeldze.

Coursework: Ethical Hacking I & II, Practical Cyber Security, Linux, Computer Networks (Cisco Packet Tracer), Programming in Python.

Credential:

[Nick_Bregadze_SCSA.pdf](#)

Technical Skills

Programming & Development: Python 3 (OOP, Scripting), Bash, Git, VS Code

Security & Cryptography: cryptography.fernet, Data Privacy (PII Detection), Web Security (XSS, SQLi, LFI, PrivEsc)

Offensive Security Tools: Nmap, Gobuster, Metasploit, Burp Suite, Wireshark

Systems & Networking: Linux (Kali), Windows, TCP/IP, Ports & Services

Hands-On Projects

PII Anonymizer Engine (Python) | Self-Led Project

Architected an Object-Oriented Python application designed to sanitize user input before interacting with Large Language Models (LLMs).

Integrated dataflog to scan and map Personally Identifiable Information (emails, phone numbers, SSNs).

Utilized cryptography.fernet to locally encrypt sensitive data, replacing it with secure placeholders to maintain strict data privacy standards.

Web Application Security Capstone | SCSA Final Project

Conducted a comprehensive vulnerability assessment on a target web application. Enumerated and successfully exploited a stored/reflected XSS vulnerability and demonstrated

session hijacking risks via cookie theft.

Discovered exposed backend logic files using Gobuster and documented the attack surface, impact, and mitigation strategies in a professional security report.

TryHackMe & DVWA Practical Labs

Completed extensive practical labs focusing on reconnaissance, enumeration, and post-exploitation.

Practiced safe testing methodologies in controlled environments (DVWA), gaining a practical understanding of real-world attack flows.
