Training & Certifications

Scientific Cyber Security Association (SCSA)
Comprehensive Cybersecurity Training Program – Certificate:

Certificate of Completion
This is to certify that
Nick Bregadze
Has successfully completed the following courses:
Practical Cyber Security
Programming in Python
Computer Networks and Linux
Ethical Hacking 1
Ethical Hacking 2
Capstone Project
In the frame of Penetration Testing Specialization
Provided by Scientific Cyber Security Association
Sergei Simonovi
Ketevan Grdzelidze
Irakli Pirtskhalava
07.11.2025
Date
SCIENTIFIC CYBER SECURITY ASSOCIATION

Completed practical coursework in:

- Ethical Hacking I & II
- Practical Cyber Security
- Linux
- Computer Networks (extensive Cisco Packet Tracer use)
- Programming in Python

Certificate signed by:

- **Ketevan Grdzelidze** – Lecturer, Caucasus University
- **Irakli Pirtskhalava** – Lecturer, Caucasus University (Python specialist)
- **Sergei Simonovi** – Ethical Hacker, Lecturer, Caucasus University
  (Experience includes securing major banks and high-profile brands in Georgia)

Profile

Motivated junior cybersecurity practitioner with hands-on experience in web application security, network analysis, and Linux-based offensive tools. Completed extensive practical labs and a real-world style capstone project focused on enumeration and exploitation. Looking to start in a junior security, SOC, or IT role and grow fast through real work.

Technical Skills

- **Operating Systems:** Linux (Kali), Windows
- **Networking:** TCP/IP, ports & services, traffic analysis (Wireshark), Cisco Packet Tracer
- **Offensive Security Tools:** Nmap, Gobuster, Metasploit, Burp Suite
- **Web Security:** XSS,SQLi, LFI, session hijacking and privesc concepts, enumeration, insecure file exposure
- **Labs & Practice:** TryHackMe, DVWA
- **Programming:** Python (security-focused basics)

Hands-On Experience & Projects

Capstone Project – Web Application Security

- Enumerated and exploited a web application with a stored/reflected **XSS vulnerability**
- Demonstrated **session hijacking risk** via cookie theft
- Discovered exposed backend logic files accessible from the frontend using **Gobuster**
- Documented attack surface, impact, and security implications

TryHackMe Practical Labs

- Completed all major beginner labs, plus multiple medium and select hard labs
- Performed reconnaissance, enumeration, exploitation, and post-exploitation steps
- Gained practical understanding of real-world attack flow rather than isolated tools

DVWA & Practice Environments

- Exploited common web vulnerabilities in intentionally vulnerable applications
- Practiced safe testing methodology in controlled environments
